Date: July 1998

Directory: \PSX\UTILITY

The contents of this directory have changed since the last CD release. (2.1)

This directory contains the following:
* - marks directories that have moved.

         * CDEXEC-   Contains source to the "cdexec.cpe" file
                          which is used to boot programs directly from
                          the CD.
                          * - Moved to: \psx\sample\module

         CCS2POS -   A utility for that takes a .CCS file (as saved
                          from CD-Gen software) as input, and outputs a
                          header file, with all the files defined as macros
                          and their values having their absolute sector
                          address on the CD (contributed by Ben Fawcett,
                          formerly of SCEE).

         * MENU -   Contains a utility for running the precompiled
                          samples on the Programmer Tools CD.
                          * - Moved to: \psx\sample\module

         PCDOWN -   Contains a utility for allowing your computer
                          to capture the output of the serial port of a
                          blue debugging station.

         * SOUND -   This Macintosh .hqx file contains version 1.01
                          of the Sound Library to provide you the
                          functionality of aiff2vag and raw2xa
                          in your own Macintosh programs.
                          * - Moved to: \psxsound\mac\
